

Commodity Guide

Bakery Product

Product Description

Bakery Product refers to a variety of products with the typical analysis shown below. It consists of various combinations of breads, crackers, cookies, doughnuts, cakes, snacks, candies and so forth (as available from the food and baking industry), usually dried and ground together to uniform particle size. The edible material is usually separated from the non-edible packaging prior to blending.

Storage and Handling

Bakery Product that is finely ground and containing a high level of sugar and fat may require special bin storage to ensure proper flowability. However, in on-farm situations where commodities are stored in bays or protected flat storage this will not be a problem.

TYPICAL ANALYSIS*:

		DM	As Fed
Dry Matter	%	100.0	91.0
Crude Protein	%	12.0	11.0
Fat	%	11.0	10.0
Crude Fiber	%	1.1	1.0
ADF	%	2.0	1.8
NDF	%	7.0	6.3
NE _L (Rum)	Mcal/lb.	0.94	0.86
NE _M (Rum)	Mcal/lb.	0.97	0.88
NE _G (Rum)	Mcal/lb.	0.67	0.61
TDN	%	98.0	89.0

Use and Application

Bakery Product is higher in energy than corn and low in fiber. It should be restricted in cattle rations to no more than 25% of the grain mix or 8lbs. (3.6kg) per head per day. Because of its low fiber level and high level of carbohydrates (sugar and starch) and fat, Bakery Product can cause milk fat depression when fed at high levels. Poultry can be fed up to 15% of the ration as Bakery Product. In swine rations, Bakery Product could replace the grain portion of the ration, however consideration needs to be given to the ration salt levels. Feeding recommendations should be made by a competent nutritionist after evaluating all other feedstuffs available. Bakery Product is a very palatable feed and readily consumed.
