

# COMMODITY NUTRIENT PROFILE

## OAT HULLS

### DESCRIPTION

Oat Hulls consist primarily of the outer covering of oats, obtained in the milling of table cereals or in the groating of oats from clean oats.

### USE AND APPLICATION

Oat Hulls are used mostly in feed requiring or accommodating high fiber levels. They can also be used as a bedding application.

### STORAGE AND HANDLING

Oat Hulls, due to their fluffy nature, does not flow well and can create handling problems in improperly-designed mechanical systems. Oat Hulls will rapidly absorb and retain water, therefore they must be kept dry to prevent deterioration. Oat Hulls should ideally be stored on a concrete slab, and be properly sheltered and well protected from rain or other forms of moisture (condensation).

### TYPICAL ANALYSIS

	DMB	As Fed
