

Calf Supplement

Product Profile

Improve calf rumen development

Key Benefits

- Helps prevent scours, respiratory illness and coccidiosis by adding Rumensin® and prebiotic ingredients
- Supports immune function and calf health with proven yeast fermentation metabolites
- Promotes friendly microflora populations to enhance and support rumen development
- Balances lean growth, calf health, rumen development and cost of gain
- Helps control fly population (ClariFly® is added seasonally)

Product Description

- Offers a flexible range of proteins designed for continued growth based on individual needs and goals
- Is formulated to balance the nutrient requirements of growing calves as their diets shift
- Pelleted product that is an economical option when using grain on hand to make a grain mix
- May be used as a starter or a second-stage feed
- Customizable to fit individual dairy needs

Packaging & Form

- 50 pound bags or bulk
- Ability to customize on orders over 2 tons, including Deccox®, natural, organic, etc.

Feeding Guidelines

- Monensin: Hand feed continuously to calves to provide 0.14 to 1.0 mgs Monensin per pound body weight per day
- Decoquinat: Top dress or mix to provide 2.27 mgs Decoquinat per pound body weight per day up to 600 pound calves
- Do not feed undiluted
- Offer Calf Starter products at 3 to 4 days of age
- Feed as part of a balanced calf ration along with adequate amounts of good-quality forage
- Provide fresh starter daily
- Provide fresh, clean water to calves at all times
- Do not change grain ration during periods of stress such as weaning, dehorning or regrouping
