

Co-product Fortifier 0.50

Product Profile

Optimize gain and feed efficiency

Key Benefits

- Optimizes gain and feed efficiency for feedlot cattle
- Provides supplemental minerals and vitamins for growing and finishing cattle
- Helps prevent nervous disorders (polioencephalomalacia – PEM) commonly associated with corn co-product diets
- Aids in the maintenance of health, growth and reproductive performance

Product Description

- Specially formulated to take advantage of nutrients already present in corn-co-products
- Contains high levels of vitamins and calcium for proper ration fortification
- Available in non-medicated and multiple medicated variations
- No added phosphorus, which makes for significant cost savings

Packaging & Form

- 50 pound bag or bulk
- Available in non-medicated and medicated forms

Mixing Directions

- Thoroughly mix 0.30 to 0.50 pounds per head per day of the following Furst-McNess Co-product Fortifiers. Follow complete feed mixing directions on the label for medicated options.
