

Bova Breeder Minerals

Product Profile

Maintain healthy immune systems in your cattle

Key Benefits

- Provides high levels of available trace minerals and vitamins
- Reduces breeding and cleaning problems
- Helps improve reproductive performance
- Increases immune competency
- Helps cows prepare for and recover from pregnancy, calving and lactation
- Lowers the calving interval for cows
- Increases calf value via larger animals at weaning

Product Description

- Specially-formulated to be palatable for consistent consumption on pasture
- Provides for greater bioavailability of nutrients to the animal
- Designed to be fed straight from the bag
- Available in multiple formulations to meet various nutritional needs

Packaging & Form

- 50 pound bag

Feeding Directions

- Begin feeding Bova-Breeder minerals two months before stress periods such as calving or breeding.
- Average daily consumption should be 2 to 2.7 ounces per head, per day.
- Place in a clean dry feeder near a feed or water source.
- No more than a 7 to 10-day supply should be put out at one time. This will assure freshness and help maintain adequate consumption.
- Provide one feeder per 15 to 20 head of animals.
- Location of feeders is very important. If mineral consumption is too low, placing mineral feeders closer to heavily-traveled areas may improve consumption.
- Consumption will vary with pasture conditions. Relocate or adjust mineral feeder numbers to either increase or decrease consumption as conditions dictate.
- Do not feed to sheep or other copper-sensitive species.
